EDUCATION

- | | |
|--------------------------|---|
| 2015.9–2018.6 (EXPECTED) | Ph.D. in Computer Science
<i>The Hong Kong Polytechnic University, China</i> |
| 2012.9–2017.12 | Ph.D. in Computer Applied Technology
<i>Sun Yat-sen University, China</i> |
| 2008.9–2012.6 | B.S. in Software Engineering
<i>Sun Yat-sen University, Guangzhou, China (GPA: 3.9/5, ranking 5/89)</i> |

HONORS & AWARDS

- | | |
|-----------|---|
| 2015–2016 | Graduate National Scholarship |
| 2014–2015 | Graduate National Scholarship |
| 2010–2011 | National Encouragement scholarship (top 5% of 89) |
| 2010–2011 | First-class scholarship - Superior Student (top 5% of 89) |
| 2009–2010 | National Encouragement scholarship (top 5% of 89) |

RESEARCH INTERESTS

Computer Vision

- Visual Detection, including saliency detection, face identification, general object detection.
- Human-centric Analysis, including 2D/3D human pose estimation, human activity recognition.

Machine Learning

- Curriculum Learning & Self-paced Learning
- Self-supervised Learning
- Semi-supervised Learning, including deep active learning.

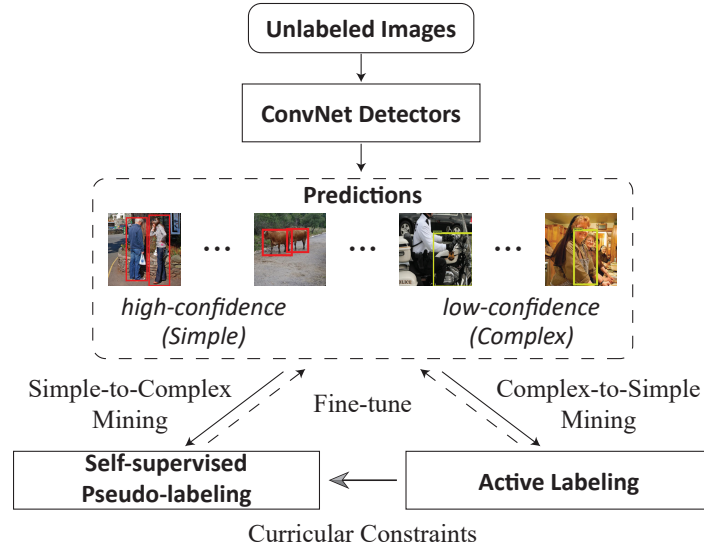

ACADEMIC SERVICES

Conference Reviewer:

- IEEE Conference on Computer Vision and Pattern Recognition (CVPR) 2018
- International Joint Conference on Artificial Intelligence (IJCAI) 2018 Journal Reviewer:
 - IEEE Transactions on Image Processing (TIP)
 - IEEE Transactions on Multimedia (TMM)
 - IEEE Transactions on Circuits and Systems for Video Technology (TCSVT)
 - Neurocomputing
 - Pattern Recognition (PR)

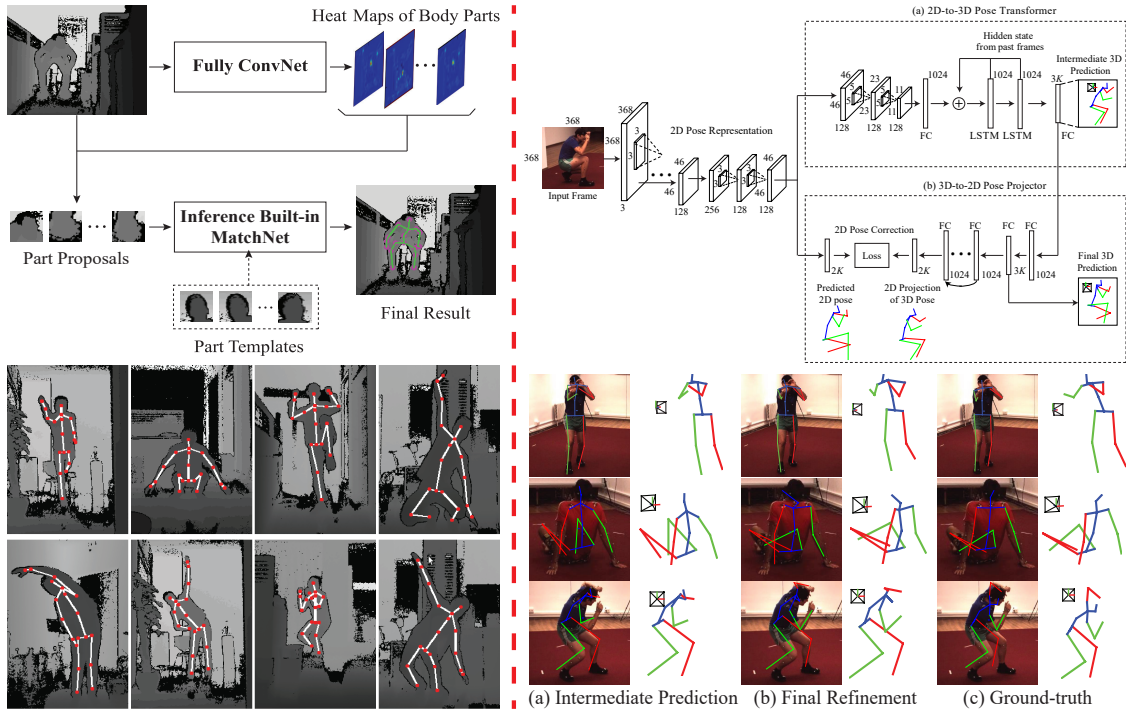

SELECTED PROJECTS

- **Self-driven Progressive Learning System for Large-scale Visual Recognition.**

We developed a rational yet cost-effective pipeline to significantly decrease the amount of user annotations for improving large-scale visual recognition (e.g., *face identification* and *object detection*). Specifically, our system mines from unlabeled and partially labeled images by automatically distinguishing the samples with high prediction confidences, which can be easily and faithfully recognized by computers via a simple-to-complex fashion, and low-confident ones, which can be labeled by active users in an interactive complex-to-simple manner.

- **Network Acceleration on Embedded Devices.** We presented a simple yet effective strategy to design lightweight network architectures. Moreover, we have also studied the fastest convolution algorithm (i.e., winograd) and further extended it with specific optimizations for the ARM Cortex-A15 (32bit) and Cortex A72 (64bit) chips. The Guangzhou company named “Xinjiezhou” has already selected our method as a solid solution for their commercial products.
- **Human-centric Analysis System.**

We proposed several methods to accomplish a real-time and high-accuracy system to predict 2D/3D human poses from depth or common RGB cameras. This system works efficiently and properly on mobile devices, e.g., MiBox 3.
